To Whom It May Concern

I am pleased to be able to support Dr. Artur Jurczyszyn in the procedure to be full professor in Poland.

Dr. Jurczyszyn had earned his MD and PhD degrees at the Jagiellonian University Medical College. Thereafter, he has been working for the last 25 years as haematologist at the Department of Hematology of the University Hospital in Krakow, Poland.

Dr Jurczyszyn has been an active member of the International Multiple Myeloma rESEarch (IMMEnSE) consortium for the last 10 years. IMMEnSE has been organized on the basis of common criteria used in other international cohorts and consortia. Research within IMMEnSE is developed in an extremely collaborative, open minded and inclusive frame.

During last 10 years Dr. Jurczyszyn has coauthored, in the context of IMMEnSE, many papers which appeared in Leukemia, British Journal of Haematology, Leukemia & Lymphoma, International Journal of Cancer, Nature Communications etc.

I consider Dr. Jurczyszyn to be a scientist of extraordinary knowledge, experience and unique professional talents. He is, without a doubt, a scholar whose work has been recognized internationally for its enormous impact on the field.

Best regards.
